

State Form 4336

## DEPARTMENT OF ENVIRONMENTAL MANAGEMENT

INDIANAPOLIS

OFFICE MEMORANDUM

Date: October 9, 2001

Thru: Vic Windle VW 10/10/01

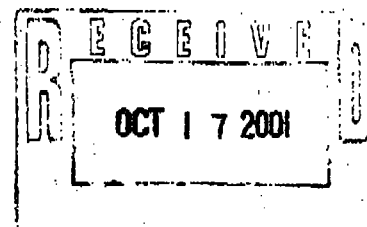

To: Jessica R. Huxhold  
Federal Programs Section  
Office of Land Quality

From: Ruth Jean  
Hazardous Waste Permit Section

Subject: ARARs for the Himco Dump Superfund Site, Elkhart, IN

This site is a landfill that was operated from 1960 until 1976, receiving commercial, industrial, and medical waste, and general refuse.

There is no indication in the fact sheet prepared by EPA, Region 5, that the landfill received hazardous waste. Additionally, the period of operation was pre-RCRA. Therefore, this site is not subject to RCRA ARARs.

## DEPARTMENT OF ENVIRONMENTAL MANAGEMENT

INDIANAPOLIS

**OFFICE MEMORANDUM**

Date: October 31, 2001

To: Jessica Huxhold Fliss, Project Manager  
Federal Programs Section  
Office of Land Quality

Thru: Doug Wagner, Section Chief  
Policy and Guidance Section  
Office of Air Quality

From: Robert Ondrusek *RO*

Subject: Applicable or Relevant and Appropriate Requirements (ARARs) for the Himco Dump, Elkhart, Indiana, EPA ID # IND980500292.

The source of emissions at this site would be the fugitive dust and the volatile organic compound (VOC) in the material that migrates to the permeable material. Calculation of VOC emissions will be difficult to determine because of the composition of the material, the amount collected, and no available published emissions factors. Estimated emission of VOC can be used to determine applicable Article 2 permit requirement.

**Article 2 Permit Review Rules****326 IAC 2-1.1-3(d)(1)(D)**

If potential VOC emissions are less than ten (10) tons per year, the source will be exempt and no further action is required.

**326 IAC 2-5.1-2(a)(1)(C)**

If potential VOC emissions are less than twenty-five (25) and equal to or greater than ten (10) tons per year, the registration permit requirements apply.

**326 IAC 2-5.1-3(d)(1)(D)**

A source that has the potential to emit ten (10) tons per year of any single hazardous air pollutant or twenty-five (25) tons per year of a combination of hazardous air pollutants, listed pursuant to Section 112(b) of the Clean Air Act, is subject construction and operation permit requirement. A source with lower emissions is classified as exempt.

**326 IAC 2-5.1-3(a)(1)(E)**

A source that has the potential to emit twenty-five (25) tons per year, construction and operation permit requirements.

**326 IAC 6-4 Fugitive Dust Emissions****326 IAC 6-4-2(4)**

Fugitive dust concentrations crossing the property line shall not exceed sixty-seven percent in excess of ambient upwind concentrations as determined by the formula in this Rule.
